Android Software Developer

Highly analytical professional with substantial experience executing all facets involved in design, development, and implementation of key applications, solutions, and integrations by leveraging available tools, equipment, and platforms. Proven ability to assimilate and rapidly utilize emerging technologies. Demonstrated history of creating Android apps and proficient at performing unit testing.

Area of Expertise

- Android Development
- Clean Code
- Development Training

- Technical Analysis
- Translate Requirement to Code
- Knox Management System

- Unit Testing
- Quality Compliance Assurance
- Risk Identification & Mitigation

Technical Proficiencies

Programming Languages: Kotlin, Java

Tools& Technologies: CI/CD, MVVM, MVP, Navigation Component, Data Binding, View Binding,Dagger Hilt, Modular, Lifecycle, Jetpack components, Material Design, Kotlin Coroutines, Clean Architecture, Firebase, GIT, Unit Testing

Career Experience

Alamarfoods - Domino's Pizza, (Remotely)   02/2019 – Present
Senior Android Developer

Create an undetectable tablet and mobile monitoring app with advanced key features, including location tracking. Built mobile app for delivery drivers and tablet app for admins to monitor drivers' operations. Configure device settings and control corporate data accessed by employees using Knox management system. Regulate and moderate high-quality deliverables to report/maintain daily workflow. Planned and executed software development tools by laid out rules and procedures.

- Decreased 90% monthly map expenses by using technical approaches while transforming communication ways with Google map APIs to achieve identical business value.
- Engaged with fresh QA members to understand processing of Android app testing.
- Possessed in-depth knowledge of CI/CD and introduced it to company.

Noventapp, Amman, Jordan   05/2018– 01/2019
Android Software Developer - Teamlead

Developed clean code system to understand execution flow of entire application. Designed custom-rendered views with animation. Created diverse environments leveraging configurations tools, including Dev, Stage, Prod environments. Liaised with cross-functional teams to design and deploy new features. Established estimated tasks lists to assign resources through Jira within Agile framework.

- Maximized efficiency of development team by focusing them on code processing.

- Built Android app using Firebase integration.

Invetechs, Amman, Jordan (Remotely)   03/2018– 04/2018
Android Software Developer

Enhanced design by adapting material design guidelines. Operated multiple applications which offer diverse services to KSA customers, encompassing Dr. Health, Khadimah, and Azrar app. Identified areas for modification in existing programs.

- Diagnosed bugs to improve application compatibility within multiple versions of Android and device types.

- Tracked all stages of staging and development by introducing crash logs and performance monitoring tools.

Mobile NOC, Amman, Jordan   07/2017– 03/2018
Android Software Developer

Translated requirements into codes and delivered features in Android along with unit tests and documentation. Identified and implemented robust procedures to develop products for tablets. Maintained existing Android Apps by making modifications as required within Agile scrum environment. Integrated Google Maps API V2. Proposed tools/technologies, including Kotlin, MVVM, and Dependency Injection to maintain code readability and scalability.

- Checked software modules and products to meet specified requirements by unit testing.

Zero One Technology   06/2016– 08/2017
Android Software Developer

Worked on Applications that offer different services to customers and many Graduation Projects .
